DLEGM2 no Cocksfoot (AHL3, AHL4, IGL3)

Ratings

For Denser Buffer Strips

Lower growing grass species combined to produce a dense, easily managed turf, which when grown alongside the BGM1, will attract a wider range of wildlife, provide an easier run for larger mammals and produce a barrier reducing the risk of weed infestation to any adjacent crop.

- More functional than BGM1 offering a lower growing option.
- Good ground cover potential for weed suppression.
