

Very palatable

- Orange root
- High yields
- Good establishment
- Clean roots

Ratings

Cleanness of root

Root in ground

Rust resistance

Grazing suitability

Lifting suitability

A very consistent variety producing a clean highly palatable orange root with average dry matter yields.

It has good resistance to leaf disease and bolting. Jamon benefits from large top size and has 33% of its root above the ground which allows for easy lifting.

Pack Size	Seed Treatment
50,000 seeds per acre	Tachigaren + Force
