

For colourful buffer strips

## Ratings

### Buffer Strips

**WF1 is a competitively priced mixture of legumes and wild flowers suitable for adding into any of the Stewardship grass mixtures. Add to the standard mixtures when drilling, or sow by hand afterwards along the headlands to produce drifts of wild flowers.**

- Over the seasons, wild flowers adapted to your local soils and management will appear in fields or headlands managed under Stewardship protocols. To get a faster environmental and visual impact, wild flowers and legumes can be sown with the grass.
- A small amount of wild flower seed can go a long, long way.
