

%	Cultivar	Species
15%	CALVANO	Intermediate pe
30%	BOYNE	Intermediate pe
25%	TODDINGTON	Late perennial ryegr
20%	MAXINA	Creeping red fescue
10%	COMER	Timothy

Long term horse grazing with an option to produce a quality hay crop. Horsemax Paddock is designed using diploid Perennial Ryegrasses, Timothy and Creeping Red Fescue. Sward density is a key consideration as both grazing and winter feed are often produced from the same area. Timothy is much favoured by horses and in particular gives hay a sweet smell and is very palatable. Creeping Red Fescue is key to binding the sward together and because of its growth habit quickly repairs the turf when damaged by hooves.
