

Consistent root size and reliable high dry matter yields

- A popular white-root variety
- Even white root size
- High dry matter content: 19-20%
- High yields
- A consistent, reliable variety
- Good resistance to rust

Magnum has a consistent root size and reliable high dry matter yields.

It is a very palatable variety therefore increasing appetite and dry matter intake in all stock.

Higher dry matter fodder beet has been shown to increase milk yield and daily live weight gain.

Due to its high dry matter content it is more frost resistant than other varieties with a high proportion of clean, white root in the ground
