Biofumigant

Avalon is a very leafy turnip that is late flowering, covers the soil very fast and is winter hardy.

This variety can be sown in spring or autumn and for forage production these leafy turnips can be grazed after just 6-8 weeks.

Avalon also has a very high dry matter yield and excellent resistance to Alternaria.

Seed Rate	Pack Size	S
5 - 7.5kg/ha	10 & 25kg	U
