Salt tolerance

Magic stress tolerance

TETRAMAGIC has shown improvements for several characteristics during the breeding process, without compromising visual merit.

Wear & Tear improvements

The wear tolerance expresses itself with a better live ground cover, but also through a much better recovery capacity.

Suited for professional sport pitches as well as home lawns

Improved fineness and density combined with healthy leaves and roots contribute to good visual merit year round.

Perennial ryegrass is the fastest establishing perennial lawn species and is also the species with the widest range of possible sowing periods.
