

Naturally disease tolerant plants has the best qualifications to perform according to their turf potential.

Because GIMA has superior disease tolerance you get less worries about turf management.

You can have the best looking green even when disease pressure in the area is high.

Chewings are known for early green up and low thatch build up. Gima has, on top of that, excellent density and proven first-class performance under close mow management.

"GIMA is a beautifully dense, medium green variety and your ideal mixing partner with Slenders in fescue greens." -
Sabrina Rasmussen, fescue breeder, DLF
