Salt tolerance

The highest wear tolerance

All parameters for measuring wear tolerance raises SOMBREIRO to the top: Live ground cover, visual merit after wear treatment, recovery, shoot density... First choice for all mixtures for sports and play, whether football, rugby, golf tees and fairways, public playgrounds...

Extended uses

The fineness of leaves and high density allows the use of SOMBREIRO for a wide range of purposes including home lawns. One very strong and appreciated feature is the self-repairing capacity due to the extension via rhizomes. Rhizomes are below ground stems spreading horizontally and giving birth to new shoots.

Medium to dark green colour

SOMBREIRO is darker than most other Smooth Stalked Meadow Grasses. Perennial Ryegrass is the preferred mixing partner for cooler regions whereas Tall Fescue is the best choice for hot and dry regions.
