

With nitrogen seed coating

GrassMax™ Overseeding Mixture has been designed to meet the precise requirements of the field and its intended use. It is important to remove all surplus growth from the existing sward before overseeding.

ProNitro® is coated directly onto the seed so the germinating and developing seedling receives the full benefit of the additional nutrition.

- Enhanced early growth and improved tolerance to stress
- Fertiliser application exactly in the root zone
- Bigger and heavier seed in better contact with soil surface
- Feeds only the seed not the weed or surrounding grass
- Better root and shoot extension
- Average of 30% more viable plants
- No application costs
- Replaces seed-bed fertiliser

Usage:

Seed Rate	Pack Size	Use
10kg/acre (25kg/ha)	20kg	Overs

All GrassMax™ Overseeding Mixture is available without clover.

The 10kg/acre seed rate is maintained by substituting the clover with additional grass.
